Summary

Final-year B.Tech CSE (Cloud Computing & Automation) student focused on cloud infrastructure and deployment automation. Experience provisioning AWS environments with Terraform, containerizing services with Docker, and running CI/CD pipelines through GitHub Actions on Linux, supported by Python and boto3 scripting. **AWS Certified Solutions Architect - Associate** and **AWS Certified Cloud Practitioner**. Seeking a DevOps, Cloud Engineering, or Software Engineering internship.

Education

VIT Bhopal University 2023 - 2027
B.Tech CSE (Cloud Computing & Automation), CGPA: **8.43/10**

K.R Education Center 2020 - 2022
Class XII: **74.5%** | Class X: **83.83%**

Technical Skills

Cloud Platforms: AWS (EC2, S3, VPC, IAM, ECR, EBS, Elastic IP, CloudWatch, AWS CLI), Google Cloud Platform (GCP)

Infrastructure & Containers: Terraform, Docker, Kubernetes, LocalStack, Infrastructure as Code (IaC)

CI/CD & Version Control: GitHub Actions, Git, GitHub, CI/CD pipelines, REST APIs

Languages & Systems: Python (boto3), Bash, SQL, Linux, Operating Systems, Computer Networks, DBMS (SQL/NoSQL)

Experience

Zulton Technology | *Cloud Engineer Intern* Remote | May 2026 - Jul 2026

- Provisioned **3** AWS environments spanning **EC2, VPC, ECR, and IAM** through version-controlled Terraform configurations, cutting a multi-step console setup to a single apply and making any environment rebuildable from code.
- Containerized **8** backend services with **Docker** and shipped them through a **3-stage GitHub Actions workflow** – build, image push to ECR, and deploy – that ran automatically on every merge to main.
- Configured **15+** **CloudWatch** alarms and log groups on CPU and HTTP error-rate thresholds, surfacing failed deployments within minutes instead of during manual log review.
- Resolved pipeline and container failures alongside senior engineers, and standardized **Git** branching and pull-request conventions later adopted across **6** team repositories.

Projects

AWS Cost Optimization & Governance Tool | *Python, boto3, Terraform, LocalStack, GitHub Actions* May 2026

- Built a Python scanner on **boto3** that detects idle and orphaned resources across **4 categories** – unattached EBS volumes, stopped EC2 instances, unassociated Elastic IPs, and untagged assets – **cutting monthly EC2 and EBS spend by 50%**.
- Split execution into **2 modes**, dry-run and remediation, so every flagged resource was reviewed against a generated findings list before deletion, preventing teardown of in-use infrastructure.
- Ran Terraform validation against **LocalStack** in a GitHub Actions pipeline on every push, catching misconfigurations pre-deploy at **\$0 in AWS charges** and removing a manual test step from each change.
- Generated cost reports in **2 formats** – JSON for tooling and Markdown for review – breaking down waste by resource type and owner tag to give each scan a repeatable audit trail.

Full DevOps Automation Platform | *Docker, Terraform, GitHub Actions, AWS EC2/ECR/IAM* Jan 2026

- Containerized **10+ backend services and REST endpoints** with Docker, published images to **Amazon ECR**, and deployed them to EC2 through GitHub Actions triggered on push.
- Defined the full stack – VPC, security groups, EC2 instances, and IAM roles – in **Terraform**, reducing a multi-step manual release to a single pipeline run and **cutting deployment time by 75%**.
- Moved every credential into **GitHub Secrets** and scoped IAM roles to least privilege, leaving **0 long-lived access keys** in application code and closing a common credential-leak path.

Certifications

AWS Certified Solutions Architect - Associate (SAA-C03) Aug 2026

AWS Certified Cloud Practitioner (CLF-C02) Jul 2026

Google IT Support Professional Certificate Jan 2026

Achievements

Scored **900+/1000** on both AWS certification exams (SAA-C03 and CLF-C02), clearing each above the required passing score.
